Write a summary or make notes of the following.

Helicopters are different from airplanes. They can do three things that airplanes cannot do first, when airplanes move upward, they must also move forward. But helicopters move straight up without moving ahead. Second, helicopters can fly backward, which airplanes cannot do. Third, helicopters, can use their rotors to hover (stay in one place) in the air which is impossible for planes. Since, helicopters can take off without moving forward, they do not need a runway for take off. Because they can hover, they are used on firefighting missions to pour water on fires. They are used in logging operations to lift trees out of forests. Helicopters are used as air ambulances to airlift patients out of disasters. The police use helicopters to follow suspects on the ground or to search a culprit inside that dark wood. Of course, helicopters have military uses because, of their design and Capabilities.
