A frog is an animal that lives both on land and in water. So it's also called an amphibian. When there is more cooling in the atmosphere, It goes inside the ground for about 2 feet. There is a difference between the front and back legs of the frog. Actually, it has four legs and its hind legs are bigger than the front legs. The temperature of the frog varies according to the temperature of the environment. They are mostly seen during the rainy season. So far, more than five thousand species of frogs have been discovered.

- a) Where do frogs live?
 b) How many species of frogs are there?
 c) Which legs of the frog are bigger?
 d) When does the frog go inside the ground?
