 (OR)

b) **Read the following passage and answer the questions in your own words.**

The most of us the most fascinating thing about spiders is the web they spin. First of all spiders are not insects. They belong to group known as 'arachnids' and differ from insects in such a way that they have eight legs, eight eyes, wings and only two parts in their bodies.

They can live on any type of climate and are found in every part of the world. They can live on water, on the ground, depending on the species. They vary in size from eight centimeters to that which are so small, that they are barely visible. Some spiders can live for a whole year without water. One of the spiders the large tarantula eats birds and can live for as long as fifteen years, some on the other land, live just for a year.

The silk in spider's web is secreted in abdominal glands. The silk is forced through long tiny holes from the spinning organs at the tip of the abdomen. It comes out as a liquid which becomes solid on contact with air.

Questions :

- i) Why are spiders not considered insects?
 ii) What is the most fascinating aspect of spiders?
 iii) Describe the special features of tarantulas.
 iv) How does the silk in the spider's abdomen change into solid state?
 Pick out the word that is equivalent to 'produced'.
