

HIGHER SECONDARY FIRST YEAR**Unit – I Fundamentals of Computers :: Chapter – II Number Systems****Evaluation Questions****Part I****I. Choose the best answer**

1. Which refers to the number of bits processed by a computer's CPU? **Word length.**
2. How many bytes does 1 KiloByte contain? **1024**
3. Expansion for ASCII. **American Standard Code for Information Interchange**
4. 2^{50} is referred as. **Peta.**
5. How many characters can be handled in Binary Coded Decimal System? **64**
6. For 11012 what is the Hexadecimal equivalent? **D**
7. What is the 1's complement of 00100110? **11011001**
8. Which amongst this is not an Octal number? **876**

II. Very Short Answers

1. What is data?
 - The term data comes from the word datum, which means a raw fact.
 - The data is a fact about people, places or some objects.
 - Computer handles data in the form of '0' (Zero) and '1' (One).
2. Write the 1's complement procedure.

Step 1: Convert given Decimal number into Binary.

Step 2: Check if the binary number contains 8 bits, if less add 0 at the left most bit, to make it as 8 bits.

Step 3: Invert all bits (i.e. Change 1 as 0 and 0 as 1)
3. Convert $(46)_{10}$ into Binary number.

2	46	
2	23	- 0
2	11	- 1
2	5	- 1
2	2	- 1
1	1	- 0

$46_{10} = 101110_2$

4. We cannot find 1's complement for $(28)_{10}$. State reason.
We cannot find 1's complement for $(28)_{10}$. Because it is a positive number. 1's complement apply only with negative number.
5. List the encoding systems for characters in memory.

Several encoding systems used for computer.

 - BCD – Binary Coded Decimal
 - EBCDIC – Extended Binary Coded Decimal Interchange Code
 - ASCII – American Standard Code for Information Interchange
 - Unicode
 - ISCII - Indian Standard Code for Information Interchange

III. Short Answers

1. What is radix of a number system? Give example
 - A numbering system is a way of representing numbers.
 - The most commonly used numbering system in real life is Decimal number system, others Binary, Octal, Hexadecimal number system.
 - Each number system is uniquely identified by its base value or radix.
 - Radix or base is the count of number of digits in each number system.
 - Decimal Number System - Radix or base 10 – $(150)_{10}$
 - Binary Number System - Radix or base 2 – $(101110)_2$

- Octal Number System - Radix or base 8 – $(226)_8$
- Hexadecimal Number System - Radix or base 16 – $(7E)_{16}$.

2. Write note on binary number system.

- There are only two digits in the Binary system, namely, 0 and 1.
- The numbers in the binary system are represented to the base 2 and the positional multipliers are the powers of 2.
- The left most bit in the binary number is called as the Most Significant Bit (MSB) and it has the largest positional weight.
- The right most bit is the Least Significant Bit (LSB) and has the smallest positional weight.
- Example 1101_2 .

3. Convert $(150)_{10}$ into Binary, then convert that Binary number to Octal

4. Write short note on ISCII

- Indian Standard Code for Information Interchange (ISCII) is the system of handling the character of Indian local languages.
- This as a 8-bit coding system. Therefore it can handle 256 (28) characters.
- This system is formulated by the department of Electronics in India in the year 1986-88 and recognized by Bureau of Indian Standards (BIS).
- Now this coding system is integrated with Unicode.

5. Add a) $-22_{10} + 15_{10}$ b) $20_{10} + 25_{10}$

a) $-22_{10} + 15_{10}$

IV. Short Answers

1. A) Write the procedure to convert fractional Decimal to Binary.

The method of repeated multiplication by 2 has to be used to convert such kind of decimal fractions.

The steps involved in the method of repeated multiplication by 2.

Step 1: Multiply the decimal fraction by 2 and note the integer part. The integer part is either 0 or 1.

Step 2: Discard the integer part of the previous product. Multiply the fractional part of the previous product by 2. Repeat Step 1 until the same fraction repeats or terminates (0).

Step 3: The resulting integer part forms a sequence of 0s and 1s that become the binary equivalent of decimal fraction.

Step 4: The final answer is to be written from first integer part obtained till the last integer part obtained.

B) Convert $(98.46)_{10}$ to Binary.

i) Integer Part conversion	ii) Fractional part conversion
