# SAMPLE QUESTION PAPER <br> Summative Assessment - II <br> Class-X (2016-17) <br> Mathematics 

Time Allowed: 3 Hours
Max. Marks: 90

## General Instructions:

1. All questions are compulsory.
2. The question paper consists of $\mathbf{3 1}$ questions divided into four sections $\mathbf{A}, \mathbf{B}, \mathbf{C}$ and $\mathbf{D}$
3. Section $A$ contains $\mathbf{4}$ questions of $\mathbf{1}$ mark each. Section $B$ contains $\mathbf{6}$ questions of $\mathbf{2}$ marks each. Section C contains $\mathbf{1 0}$ questions of $\mathbf{3}$ marks each. Section D contains $\mathbf{1 1}$ questions of $\mathbf{4}$ marks each.
4. Use of calculators is not permitted.

## SECTION - A

(Question numbers 1 to 4 carry 1 mark each)

1. A letter is chosen at random from the letter of the "word PROBABILITY". Find the probability that it is a not a vowel.
2. Find the 17 th term from the end of the AP: $1,6,11,16 \ldots .211,216$
3. A pole 6 m high casts a shadow $2 \sqrt{ } 3 \mathrm{~m}$ long on the ground, then find the angle of elevation of the sun.
4. In the given figure PA and PB are tangents to a circle with centre O . If $\angle \mathrm{APB}=(2 x+3)^{\circ}$ and $\angle \mathrm{AOB}=(3 x+7)^{\circ}$, then find the value of $x$

SECTION - B
(Question numbers 5 to 10 carry 2 marks each)
5. Find the sum of all natural numbers that are less than 100 and divisible by 4.
6. Find the value of $p$ for which the points $(-1,3),(2, p)$ and $(5,-1)$ are collinear.
7. Find the value(s) of $k$, for which the equation $k x^{2}-k x+1=0$ has equal roots.
8. Using the figure given below, prove that $\mathrm{AR}=\frac{1}{2}$ (perimeter of triangle ABC )

9. P and Q are the points with co-ordinates $(2,-1)$ and $(-3,4)$. Find the coordinates of the point $R$ such that $P R$ is $\frac{2}{5}$ of $P Q$.
10. In the given figure, common tangents $A B$ and $C D$ to the two circles intersect at E. Prove that $A B=C D$.

## SECTION - C

(Question numbers 11 to 20 carry 3 marks each)
11. Solve the given equation by the method of completing the squares:

$$
x^{2}+12 x-45=0
$$

12. The sum of first six terms of an A.P. is 42 . The ratio of its $10^{\text {th }}$ term to its $30^{\text {th }}$ term is $1: 3$. Find the first term of the A.P.
13. From the top of a lighthouse 75 m high, the angles of depression of two ships are observed to be $30^{\circ}$ and $45^{\circ}$ respectively. If one ship is directly behind the other on the same side of the lighthouse then find the distance between the two ships.
14. The vertices of a triangle are $A(-1,3), B(1,-1)$ and $C(5,1)$. Find the length of the median through the vertex $C$.
15. The king, queen and jack of diamond are removed from a deck of 52 playing cards and then well shuffled. Now one card is drawn at random from the remaining cards. Determine the probability that the card drawn is :
i) A face card.
ii) A red card.
iii) A king.
16. Find the area of the minor segment of a circle of radius 42 cm , if the length of the corresponding arc is 44 cm .
17. A cylindrical pipe has inner diameter of 4 cm and water flows through it at the rate of 20 meter per minute. How long would it take to fill a conical tank of radius 40 cm and depth 72 cm ?
18. In given figure, $P S$ is the diameter of a circle of radius 6 cm . The points $Q$ and $R$ trisects the diameter PS. Semi circles are drawn on PQ and QS as diameters. Find the area of the shaded region.

19. Find the number of spherical lead shots, each of diameter 6 cm that can be made from a solid cuboid of lead having dimensions $24 \mathrm{~cm} \times 22 \mathrm{~cm} \times 12 \mathrm{~cm}$.
20. A wooden souvenir is made by scooping out a hemisphere from each end of a solid cylinder. If the height of the cylinder is 10 cm and its base is of radius 3.5 cm then find the total cost of polishing the souvenir at the rate of Rs. 10 per $\mathrm{cm}^{2}$.

## SECTION - D

(Question numbers 21 to 31 carry 4 marks each)
21. Draw a $\Delta \mathrm{ABC}$ with sides $\mathrm{BC}=5 \mathrm{~cm}, \mathrm{AB}=6 \mathrm{~cm}$ and $\mathrm{AC}=7 \mathrm{~cm}$ and then construct a triangle similar to $\triangle \mathrm{ABC}$ whose sides are $\frac{4}{7}$ of the corresponding sides of $\triangle \mathrm{ABC}$.
22. A train covers a distance of 90 kms at a uniform speed. It would have taken 30 minutes less if the speed had been $15 \mathrm{~km} / \mathrm{hr}$ more. Calculate the original duration of the journey
23. Cards marked with numbers $1,3,5 \ldots 49$ are placed in a box and mixed thoroughly. One card is drawn from the box. Find the probability that the number on the card is
(i) divisible by 3
(ii) a composite number
(iii) Not a perfect square
(iv) Multiple of 3 and 5.
24. In given figure, $X Y$ and $P Q$ are two parallel tangents to a circle with centre $O$ and another tangent AB with point of contact C intersecting XY at A and PQ at B . Prove that $\angle \mathrm{AOB}=90^{\circ}$

25. Solve the following quadratic equation by applying the quadratic formula:

$$
p^{2} x^{2}+\left(p^{2}-q^{2}\right) x-q^{2}=0
$$

26. The points $\mathrm{A}(1,-2), \mathrm{B}(2,3), \mathrm{C}(k, 2)$ and $\mathrm{D}(-4,-3)$ are the vertices of a parallelogram. Find the value of $k$ and the altitude of the parallelogram corresponding to the base AB .
27. From a point 100 m above a lake the angle of elevation of a stationary helicopter is $30^{\circ}$ and the angle of depression of reflection of the helicopter in the lake is $60^{\circ}$. Find the height of the helicopter above the lake.
28. A donor agency ensures milk is supplied in containers, which are in the form of a frustum of a cone to be distributed to flood victims in a camp. The height of each frustum is 30 cm and the radii of whose lower and upper circular ends are 20 cm and 40 cm respectively. . If this milk is available at the rate of Rs. 35 per litre and 880 litres of milk is needed daily for a camp.
(a) Find how many milk containers are needed daily for the camp.
(b) What daily cost will it put on the donor agency?
(c) What value of the donor agency is depicted in this situation?
29. The radii of two concentric circles are 13 cm and $8 \mathrm{~cm} . \mathrm{AB}$ is a diameter of the bigger circle and BD is tangent to the smaller circle touching it at D and intersecting the larger circle at P , on producing. Find the length of AP.
30. A manufacturer of TV sets produced 600 units in the 3rd year and 700 units in the 7th year. Assuming that, production increases uniformly by a fixed number of units every year. Find
(i) The production in $1^{\text {st }}$ year.
(ii) The production in $10^{\text {th }}$ year.
(iii) The total production in 7 years.
31. 50 circular discs, each of radius 7 cm and thickness 0.5 cm are placed one above the other. Find the total surface area of the solid so formed. Find how much space will be left in a cubical box of side 25 cm if the solid formed is placed inside it.
--000-

# SAMPLE QUESTION PAPER <br> MATHEMATICS <br> CLASS-X (2016-17) <br> SUMMATIVE ASSESSMENT -II 

## MARKING SCHEME

SECTION -A

1. $7 / 11$
[1]
2. 136
3. $60^{\circ}$
4. $34^{\circ}$

## SECTION-B

5. Here $\mathrm{a}=4, \mathrm{~d}=4$ and $\mathrm{a}_{\mathrm{n}}=96$

So, $a_{n}=a+(n-1) d$

$$
\begin{equation*}
96=4+(n-1) 4 \tag{1/2}
\end{equation*}
$$

$\therefore \mathrm{n}=24$
Now, $S_{24}=\frac{n}{2}\left(a+a_{n}\right)$
$\therefore \quad S_{24}=1200$
6. Let $\mathrm{A}(-1,3), \mathrm{B}(2, \mathrm{p})$ and $\mathrm{C}(5,-1)$ be 3 collinear points.

Then Area $\triangle \mathrm{ABC}=0$
Then, $\frac{1}{2}[-1(p+1)+2(-1-3)+5(3-p)]=0$
i.e. $-p-1-8+15-5 p=0$
i.e. $6=6 p$
i.e. $p=1$
7. For equal roots, $b^{2}-4 a c=0$

Here, $a=k, b=-k$ and $c=1$
$\therefore \mathrm{k}^{2}-4(\mathrm{k})(1)=0$
i.e. $k(k-4)=0$
i.e. $\mathrm{k}=0$ or $\mathrm{k}=4$
rejecting $\mathrm{k}=0$, we get $\mathrm{k}=4$.
8. Perimeter of $\triangle \mathrm{ABC}=\mathrm{AB}+\mathrm{BC}+\mathrm{CA}$

$$
\begin{equation*}
=\mathrm{AB}+[\mathrm{BP}+\mathrm{CP}]+\mathrm{CA} \tag{1/2}
\end{equation*}
$$

$=A B+B Q+C R+C A(T a n g e n t s$ from an external point are equal) $\quad[1 / 2]$
$=A Q+A R$
$=A R+A R$ (Tangents from an external point are equal)

$$
=2 \mathrm{AR}
$$

## 9. Point R divides PQ in ratio 2:3.

Co-ordinates of point R are given by

$$
\begin{align*}
& x=(2 \times-3+3 \times 2) / 5=0 \\
& y=(2 \times 4+3 \times-1) / 5=1 \tag{1/2}
\end{align*}
$$

So, the required point $R$ is $(0,1)$
10.

Tangents drawn to a circle from same external point are equal in length. So,

## $\mathrm{AE}=\mathrm{CE}$

And $\mathrm{EB}=\mathrm{ED}$
Adding (1) and (2), we get,

$$
\mathrm{AB}=\mathrm{CD} .
$$

## SECTION - C

11. $x^{2}+12 x-45=0$

Using the method of completing the square,
$x^{2}+12 x-45+36=36$
i.e. $x^{2}+12 x+36=36+45$
i.e. $(x+6)^{2}=81$
i.e. $(x+6)= \pm 9$
i.e. $x=3$ or -15
12. $\frac{a+9 d}{a+29 d}=\frac{1}{3}$
i.e. $a=d-$

Also, $S_{6}=42$
i.e. $\frac{6}{2}(2 a+5 d)=42$
i.e. $3(2 a+5 a)=42$ Using... (1)
i.e. $3(7 a)=42$
i.e. $a=2$
13. Let AB represent the lighthouse.
$\angle A C B=45^{\circ}$ and $\angle A D B=30^{\circ}$

Fig [1]
In $\triangle \mathrm{ABC}$,
$\tan 45^{\circ}=\mathrm{AB} / \mathrm{BC}$

$$
1=75 / \mathrm{BC}
$$

i.e. $B C=75 \mathrm{~m}$

Now, in $\triangle \mathrm{ABD}$,
$\tan 30^{\circ}=\mathrm{AB} / \mathrm{BD}$
i.e. $1 / \sqrt{3}=75 /(B C+C D)$
i.e. $1 / \sqrt{3}=75 /(75+C D)$
i.e. $75+C D=75 \sqrt{3}$
i.e. $C D=75(\sqrt{3}-1) \mathrm{m}$
14. Let $A(-1,3), B(1,-1)$ and $C(5,1)$ be the vertices of $\triangle A B C$.

Median through $C$ would be the line joining $C$ and midpoint of side $A B$. Let it be point $D$

$$
\begin{equation*}
\mathrm{D}=\left(\frac{-1+1}{2}, \frac{3-1}{2}\right) \tag{1}
\end{equation*}
$$

Coordinates of D are $(0,1)$
Length of median $\mathrm{CD}=\sqrt{(5-0)^{2}+(1-1)^{2}}$

$$
\begin{equation*}
=5 \text { units. } \tag{1/2}
\end{equation*}
$$

15. No. of cards left $=52-3=49$
$P($ face card $)=\frac{9}{49}$
$\mathrm{P}($ red card $)=\frac{23}{49}$
$P($ a king $)=\frac{3}{49}$
16. $\frac{\theta}{360} \times 2 \pi \mathrm{r}=44$.

Putting $\mathrm{r}=42 \mathrm{~cm}$, we get $\theta=60^{\circ}$
Now, Area of minor segment= Area of minor sector- Area of $\Delta$
Since $\theta=60^{\circ}$, so the triangle formed will be an equilateral $\Delta$
$\therefore$ Area of minor segment= Area of minor sector- Area of equilateral $\Delta$

$$
\text { i.e. Area of minor segment } \begin{align*}
& =\frac{\theta}{360} \times \pi \mathrm{r}^{2}-\frac{\sqrt{3}}{4} \mathrm{a}^{2}  \tag{1}\\
& =924-441 \sqrt{3} \mathrm{~cm}^{2} \tag{1/2}
\end{align*}
$$

17. Time required to fill the conical vessel= Volume of cone / volume of water coming out of cylindrical pipe per unit time

$$
\begin{equation*}
=\frac{\frac{1}{3} \pi r_{1}{ }^{2} h_{1}}{\pi r_{2}{ }^{2} h_{2}} \tag{1}
\end{equation*}
$$

$$
\begin{align*}
& =\left[1 / 3 \pi(40)^{2} \times 72\right] / \pi(2)^{2} \times 20 \times 100  \tag{1}\\
& =4.8 \text { minutes } \tag{1/2}
\end{align*}
$$

18. Area of shaded region = Area of semicircle with diameter PS - Area of semicircle with diameter QS + Area of semicircle with diameter PQ.
So, required area $=1 / 2 \pi(6)^{2}-1 / 2 \pi(4)^{2}+1 / 2 \pi(2)^{2}$

$$
\begin{equation*}
=1 / 2 \pi[36-16+4] \mathrm{cm}^{2} \tag{1}
\end{equation*}
$$

$=37.71 \mathrm{~cm}^{2}$
19. No. of lead shots $=\frac{\text { Volume of cuboid }}{\text { Volume of sphere }}$

$$
\begin{gather*}
=\frac{l_{1} b_{1} h_{1}}{\frac{4}{3} \pi r_{2}{ }^{3}}  \tag{1}\\
=\frac{24 \times 22 \times 12 \times 3}{\pi \times 3 \times 3 \times 3 \times 4}  \tag{1}\\
=56 \tag{1/2}
\end{gather*}
$$

20. Required surface area $=2 \pi \mathrm{rh}+2 \times\left[2 \pi \mathrm{r}^{2}\right]$

$$
\begin{align*}
& =2 \times \pi \times 3.5 \times 10+4 \pi(3.5)^{2}  \tag{1/2+1/2}\\
& =374 \mathrm{~cm}^{2} \tag{1}
\end{align*}
$$

Cost of polishing $=$ Rs. $374 \times 10=$ Rs .3740

## SECTION -D

21. Correct Construction of $\triangle A B C$

Correct construction of similar triangle
22. Let the speed of the train be $x \mathrm{~km} / \mathrm{hr}$.

According to question,

$$
\begin{align*}
& \frac{90}{x}-\frac{90}{x+15}=\frac{1}{2}  \tag{1}\\
& \text { i.e. } x^{2}+15 x-2700=0
\end{align*}
$$

Solving for x we get,
$x=-60$ or 45
Rejecting $x=-60$, we get, $x=45$
So, $x=45 \mathrm{~km} / \mathrm{hr}$
Time $=$ Distance $/$ Speed

$$
\begin{align*}
& =\frac{90}{45} \\
& =2 \text { hours } \tag{1/2}
\end{align*}
$$

23. (i) Cards marked with numbers which are multiples of 3 are $3,9,15,21,27,33,39$ and 45 .

So, $P($ getting a number divisible by 3$)=\frac{8}{25}$
(ii) $P($ composite number $)=\frac{10}{25}$
(iii) $P($ not a perfect square $)=1-P($ perfect square $)=1-\frac{4}{25}=\frac{21}{25}$
(iv) $P($ multiple of 3 and 5$)=\frac{2}{25}$
24.

Construction: Join OR, OC and OS.
In $\triangle \mathrm{ORA}$ and $\triangle \mathrm{OCA}$

$$
\begin{align*}
& \mathrm{OR}=\mathrm{OC} \text { (radii) } \\
& \mathrm{AO}=\mathrm{AO} \text { (common) } \\
& \mathrm{AR}=\mathrm{AC} \text { (tangents from an external point) } \\
& \triangle \mathrm{ORA} \cong \triangle \mathrm{OCA} \text { (By SSS rule) } \\
& \therefore \angle R A O=\angle C A O \text { (CPCT) }  \tag{1}\\
& \text { Similarly } \triangle \mathrm{OSB} \cong \triangle \mathrm{OCB} \text { (By SSS rule) } \\
& \therefore \angle S B O=\angle C B O \text { (CPCT) }  \tag{2}\\
& \angle R A B+\angle S B A=180^{\circ} \text { (Co- interior angles) } \\
& 2 \angle O A B+2 \angle O B A=180^{\circ} \text { (From (1) \& (2) } \\
& \angle O A B+\angle O B A=90^{\circ}  \tag{3}\\
& \text { In } \triangle \mathrm{AOB} \text {, } \\
& \angle \mathrm{OAB}+\angle \mathrm{OBA}+\angle \mathrm{AOB}=180^{\circ} \text { (Angle sum property) } \\
& 90^{\circ}+\angle \mathrm{AOB}=180^{\circ} \text { (From 3) } \\
& \angle \mathrm{AOB}=90^{\circ}
\end{align*}
$$

25. Quadratic formula, $\mathrm{x}=\frac{-b \pm \sqrt{b^{2}-4 a c}}{2 a}$

$$
\begin{equation*}
\mathrm{a}=\mathrm{p}^{2}, \mathrm{~b}=\left(\mathrm{p}^{2}-\mathrm{q}^{2}\right), \mathrm{c}=-\mathrm{q}^{2} \tag{1/2}
\end{equation*}
$$

$x=\left[-\left(p^{2}-q^{2}\right) \pm \sqrt{ }\left[\left(p^{2}-q^{2}\right)^{2}-4 p^{2}\left(-q^{2}\right)\right] / 2 p^{2}\right.$
$\mathrm{x}=\left[-\mathrm{p}^{2}+\mathrm{q}^{2} \pm\left(\mathrm{p}^{2}+\mathrm{q}^{2}\right)\right] / 2 \mathrm{p}^{2}$
$\mathrm{x}=q^{2} / p^{2}$ or -1
26. Diagonals of a parallelogram bisect each other,

So, midpoint of $\mathrm{AC}=$ midpoint of BD
i.e. $\left(\frac{1+k}{2}, \frac{2-2}{2}\right)=\left(\frac{2-4}{2}, \frac{3-3}{2}\right)$
i.e. $\frac{(1+k)}{2}=-1$
i.e. $k=-3$

Now ar $\mathrm{ABCD}=2$ Area of $\triangle \mathrm{ABD}$
$=2 \times \frac{1}{2} \times[1(6)+2(-1)-4(-5)]$ $=24 \mathrm{sq}$ units.

$$
\begin{gather*}
\mathrm{AB}=\sqrt{ }(1-2)^{2}+(-2-3)^{2}  \tag{1}\\
=\sqrt{26} \text { units } \tag{1/2}
\end{gather*}
$$

$\operatorname{Ar}(\mathrm{ABCD})=$ base $x$ height
$=A B \times h$
So, $24=\sqrt{26} \mathrm{xh}$
So, $h=24 / \sqrt{26}$ units
27.

Let FC be the lake and D be a point 100 m above the lake.
Let A be the helicopter at height $h$ metre above the lake and let E be its reflection $\therefore \mathrm{CE}=h$ metre $\angle B D E=60^{\circ}, \angle A D B=30^{\circ}$ and $\mathrm{DB}=x$ metre
[1 mark for correct figure and description]
$\operatorname{Tan} 30^{\circ}=\frac{h-100}{x}$
$1 / \sqrt{3}=\frac{h-100}{x}$
$h=\mathrm{x} / \sqrt{3}+100$
$\operatorname{Tan} 60^{\circ}=\frac{h+100}{x}$
$\sqrt{3} \mathrm{x}=h+100$
$h=\sqrt{3} x-100$
From equation $1 \& 2$
$\mathrm{x} / \sqrt{3}+100=\sqrt{3} x-100$
$\mathrm{x}=100 \sqrt{3} \mathrm{~m}$
and so $h=200 \mathrm{~m}$
i.e. height of the helicopter is 200 m .
28. (i) Volume of each container $=\frac{1}{3} \pi h\left(r_{1}{ }^{2}+r_{2}{ }^{2}+r_{1} r_{2}\right)$

$$
\begin{align*}
& =\frac{1}{3} \times \frac{22}{7} \times 30\left(20^{2}+40^{2}+20 \times 40\right) \\
& =88000 \mathrm{~cm}^{3}=88 \mathrm{l} \tag{1}
\end{align*}
$$

Total milk $=880 l$
a) Milk in 1 container $=88 l$

So number of containers $=\frac{880}{88}=10$
b) Cost $=880 \times 35=$ Rs. 30800
c) Any relevant Value inculcated
29.

[Correct Figure 1 mark]
$\angle A P B=90^{\circ}$ (angle in a semicircle)
$\angle O D B=90^{\circ}$ (tangent is perpendicular to the radius)
$\triangle \mathrm{APB}$ and $\triangle \mathrm{ODB}$
$\angle A P B=\angle O D B=90^{\circ}$
$\angle A B P=\angle O B D$ (common)
$\Delta \mathrm{APB} \sim \Delta \mathrm{ODB}(\mathrm{AA})$
$\therefore \frac{O D}{A P}=\frac{O B}{A B}(\mathrm{CPST})$
$\frac{8}{A P}=\frac{13}{26}$
$\mathrm{AP}=16 \mathrm{~cm}$
30. (i) $a_{3}=600 \quad \therefore \mathrm{a}+2 \mathrm{~d}=600$
---------------- (1)
$a_{7}=700 \quad \therefore \mathrm{a}+6 \mathrm{~d}=700$
From (1) \& (2)

$$
\begin{equation*}
d=25 \quad, a=550 \tag{1}
\end{equation*}
$$

(i) $a_{1=}=550$
(ii) $a_{10}=\mathrm{a}+9 \mathrm{~d}=550+9 \times 25=775$
(iii) $S_{7}=\frac{7}{2}(2 \times 550+6 \times 25)$

$$
\begin{equation*}
=4375 \tag{1}
\end{equation*}
$$

31. $r=7 \mathrm{~cm}, h=50 \times 0.5=25 \mathrm{~cm}$

Total Surface Area $=2 \pi r(r+h)$

$$
\begin{align*}
& =2 \times \frac{22}{7} \times 7 \times(7+25)  \tag{1/2}\\
& =1408 \mathrm{~cm}^{2} \tag{1}
\end{align*}
$$

Volume of the box $=25 \times 25 \times 25=15625 \mathrm{~cm}^{3}$
Volume of the solid formed $=\pi r^{2} h$
$=\frac{22}{7} \times 7 \times 7 \times 25=3850 \mathrm{~cm}^{3}$
Space left $=15625-3850=11775 \mathrm{~cm}^{3}$
