	Marking Scheme (2023-24)	
	Class-X	
	Science (Subject Code – 086) b	
Q. No.	Answer	Marks
	Section–A	
1	b) Barium sulphate	1
2	b) Colourless	1
3	d) NaHCO ₃	1
4	a) Sodium	1
5	b) $2 \operatorname{Na}^{+} \left[\begin{array}{c} x \times x \\ x \times 0 \\ x \\$	1
6	d) 11 (2,8,1)	1
7	c) 14	1
8	b) Mushroom	1
9	a) tongue	1
10	c) Vegetative propagation	1
11	c) Growth hormones under the influence of the enzymes coded by a gene.	1
12	c) lack of oxygen and formation of lactic acid.	1
13	d) behind the mirror and its position varies according to the object distance.	1
14	c) scattering of light.	1
15	c) CFCs, Ozone	1
16	a) Broken down by biological processes	1
17	d) Assertion is false but Reason is true	1
18	a) Both A and R are true and R is the correct explanation of A.	1
19	d) Assertion is false but Reason is true	1
20	c) A is true but R is false.	1
01	Section—B	2
21	Response with any of the given two arguments. [1+1]	2
	• Bubbles of gas/ Evolution of gas	
	• Change in colour (Zn - silvery grey to black)	
	Change in temperature	
22		2
22	• After fertilisation, the zygote divides several times to form an embryo within the	2
	ovule.	
	 The ovule develops a tough coat and is gradually converted into a seed. The overv graduation of ringing to form a finit. 	
	 The ovary grows rapidly and ripens to form a fruit. The notate groups at the and stigme may shrivel and fall off [0.5x4-2] 	
23	• The petals, sepals, stamens, style and stigma may shrivel and fall off. [0.5x4=2] To filter out nitrogenous waste products like urea and uric acid [0.5] from the	2
23	blood [0.5] in humans.	2
	Organ for storage: Urinary Bladder [0.5]	
	Organ for release: Urethra [0.5]	
	OR	
	The blood emerges from the heart under high pressure and flows through arteries.	
	Hence, to bear this pressure the arteries have thick and elastic walls. [1]	
	-Veins have values to ensure that the blood flows in one direction only. [1]	
24	a) When light travels from an optically rarer medium to an optically denser medium it	2
	moves towards the normal. Since $n_B > n_A$ hence the light ray will bend towards the	
	normal on passing from medium A to B. [0.5+0.5]	
	1	

b) The speed of the light will increase when the light travels from B to C. Since $ne < n_n and v = (c/n)$, the speed of light ray will increase in the second medium. $(0.5+0.5)$ 25 Resistance of each part is $\frac{8}{9} \Omega$ (as resistance is proportional to the length of the wire.) 2 $\frac{1}{n_t} = \frac{2}{n} + \frac{2}{n} = \frac{2}{n}$ [11] $\therefore R_f = \frac{2}{n} \cdot \frac{2n}{n} = \frac{2}{n}$ [0.5] The magnetic field strength is more in the region where the field lines are crowded. This means the field strength is maximum near the poles and it reduces as we go away from the poles. [0.5+0.5] The direction of the magnetic field is also reversed. [11] 26 a) 100001 because only 10 % of energy is available for the next trophic level. 2 b) No, since the loss of energy at each step is so great that very little usable energy will remain after 4 trophic levels. [0.5+0.5] The direction of the magnetic field is also reversed. [11] 27 a) The above reaction. Section—C 27 a) The above reaction is known as a thermite reaction as the reaction is highly exothermic reaction. OR the metal (Mn/Fe) obtained will be in moltent/ liquid state. [11] b) Substance oxidised - $\Lambda(s)$ [0.5] Substance oxidised - $\Lambda(s)$ [0.5] (c) Aluminium is preferably used in thermite reactions as it is placed above Fe and Mn in reactivity series of metals. OR Al is more reactive than Fe/Mn 28 MCl:; Ms(SO ₄); [11] M in general forms lonic bond. It can acquire a stable electronic configuration of neon (2, 8) by losing its three valence electrons to form M ³⁺ cation. [11] Compounds formed will conduct electricity in liquid / molten state but not in solid state in contrast to M ⁴ (11) b) Diagram to represent the process of refining of 'X [2] $\frac{Key}{V' - Copper'Cu and 'Y' - CuO$ [11] b) Diagram to represent the process of refining of 'X [2] $\frac{Key}{V' - Cupper'Cu and 'Y' - CuO}$ [3] $\frac{29}{V' - Copper'Cu and 'Y' - CuO}$ [4] $\frac{29}{V' - Copper'Cu and 'Y' - CuO}$ [4] $\frac{29}{V' - Cupper'Cu and 'Y' - CuO}$ [4] $\frac{29}{V' - Cupper'Cu and 'Y' - CuO}$ [4] 	h			
25 Resistance of each part is $\frac{k}{2} \Omega$ (as resistance is proportional to the length of the wire.) 2 $\frac{1}{n_1} = \frac{3}{n} + \frac{3}{n} + \frac{3}{n} = \frac{9}{n}$ [0.5] $\frac{1}{n_1} = \frac{3}{n} + \frac{3}{n} + \frac{3}{n} = \frac{9}{n}$ [11] $\therefore R_1 = \frac{k}{9} \therefore \frac{k_1}{n} = \frac{4}{9}$ [0.5] OR The magnetic field strength is more in the region where the field lines are crowded. This means the field strength is maximum near the poles and it reduces as we go away from the poles. 26 a) 100000 because only 10 % of energy is available for the next trophic level. 2 b) No, since the loss of energy at each step is so great that very little usable energy will remain after 4 trophic levels. 2 OR Section-C 27 a) The above reaction is known as a thermite reaction as the reaction is highly exothermic reaction. 3 OR the metal (Mn/He) obtained will be in molten/ liquid state. [1] b) Substance oxidised - Al(5) [0.5] Substance coluced - MnO ₂ (s) [0.5] OR All is more reactive than Fe/ Mn OR Compounds formed will conduct electricity in liquid / molten state but not in solid state in contrast				
25 Resistance of each part is $\frac{k}{2} \Omega$ (as resistance is proportional to the length of the wire.) 2 $\frac{1}{n_1} = \frac{3}{n} + \frac{3}{n} + \frac{3}{n} = \frac{9}{n}$ [0.5] $\frac{1}{n_1} = \frac{3}{n} + \frac{3}{n} + \frac{3}{n} = \frac{9}{n}$ [11] $\therefore R_1 = \frac{k}{9} \therefore \frac{k_1}{n} = \frac{4}{9}$ [0.5] OR The magnetic field strength is more in the region where the field lines are crowded. This means the field strength is maximum near the poles and it reduces as we go away from the poles. 26 a) 100000 because only 10 % of energy is available for the next trophic level. 2 b) No, since the loss of energy at each step is so great that very little usable energy will remain after 4 trophic levels. 2 OR Section-C 27 a) The above reaction is known as a thermite reaction as the reaction is highly exothermic reaction. 3 OR the metal (Mn/He) obtained will be in molten/ liquid state. [1] b) Substance oxidised - Al(5) [0.5] Substance coluced - MnO ₂ (s) [0.5] OR All is more reactive than Fe/ Mn OR Compounds formed will conduct electricity in liquid / molten state but not in solid state in contrast		[0.5+0.5]		
$ \begin{array}{c c} & (0.5) \\ \hline 1_{R_1} = \frac{3}{R} + \frac{3}{R} = \frac{9}{R} \\ (1) \\ \therefore R_1 = \frac{8}{9} \cdot \frac{2}{R} = \frac{9}{9} \\ (0.5) \\ \hline \\ $	25		2	
$\frac{1}{n_1} = \frac{3}{n} + \frac{3}{n} + \frac{3}{n} = \frac{9}{n}$ [1] $\therefore R_T = \frac{9}{n} \cdot \frac{n_t}{n} = \frac{1}{9}$ [0.5] OR The magnetic field strength is more in the region where the field lines are crowded. This means the field strength is maximum near the poles and it reduces as we go away from the poles. [0.5+0.5] [0.5+0.5] The direction of the magnetic field is also reversed. [11] 26 a) 100000 because only 10 % of energy is available for the next trophic level. 2 b) No, since the loss of energy at each step is so great that very little usable energy will remain after 4 trophic levels. 2 OR OR 11 26 No, since the loss of energy at each step is so great that very little usable energy will remain after 4 trophic levels. OR 11 27 a) The above reaction is known as a thermite reaction as the reaction is highly exothermic reaction. OR 11 OR 11 OR 10 OR		•		
$\therefore R_1 = \frac{8}{9}$ [0.5] OR The magnetic field strength is more in the region where the field lines are crowded. This means the field strength is maximum near the poles and it reduces as we go away from the poles. [0.5+0.5] The direction of the magnetic field is also reversed. [1] 26 a) 100001 because only 10 % of energy is available for the next trophic level. 2 b) No, since the loss of energy at each step is so great that very little usable energy will remain after 4 trophic levels. 2 Section—C 27 a) The above reaction is known as a thermite reaction as the reaction is highly exothermic reaction. 0R MR b Section—C 27 a) The above reaction is known as a thermite reaction as the reaction is highly exothermic reaction. 3 B Common the molen/ liquid state. [1] b) Substance oxidised - Al(s) [0.5] [0.5] Substance reduced - MnO ₂ (s) [0.5] Control [1] Aluminium is preferably used in thermite reactions as it is placed above Fe and Mn in reactivity series of metals. III Compounds forms lonic bond. It can acquire a stable electronic configuration of neon (2, 8) by losing				
OR The magnetic field strength is maximum near the poles and it reduces as we go away from the poles. [0.5+0.5] The direction of the magnetic field is also reversed. [11] 26 a) 100001 because only 10 % of energy is available for the next trophic level. 2 b) No, since the loss of energy at each step is so great that very little usable energy will remain after 4 trophic levels. 2 Section—C 27 a) The above reaction is known as a thermite reaction as the reaction is highly swill remain after 4 trophic levels. 3 OR OR the metal (Mn/Fe) obtained will be in molten/ liquid state. [1] b) Substance reduced – MnO ₂ (s) [0.5] Substance reduced – MnO ₂ (s) In reactive than Fe/ Mn OR All is more reactive than Fe/ Mn Compounds formed will conduct electricity in liquid / molten state but not in solid state in contrast to 'M' OR Alis more reactive than Fe/ Mn Compounds formed will conduct electricity in liquid / molten state but not in solid state in contrast to 'M' OR (II)		$\frac{1}{R_1} = \frac{1}{R} + \frac{1}{R} + \frac{1}{R} = \frac{1}{R} $		
OR The magnetic field strength is maximum near the poles and it reduces as we go away from the poles. [0.5+0.5] The direction of the magnetic field is also reversed. [11] 26 a) 100001 because only 10 % of energy is available for the next trophic level. 2 b) No, since the loss of energy at each step is so great that very little usable energy will remain after 4 trophic levels. 2 Section—C 27 a) The above reaction is known as a thermite reaction as the reaction is highly swill remain after 4 trophic levels. 3 OR OR the metal (Mn/Fe) obtained will be in molten/ liquid state.  Thyroxin regulates carbohydrate, protein and fat metabolism in the body. 				
- Thyroxin regulates carbohydrate, protein and fat metabolism in the body.	29	- Iodine is essential for the synthesis of thyroxin hormone.	3	

30	There are 50% chances that a girl may be born and 50% chances that a boy may be born. [1] It can be explained as follows:	3
	Most human chromosomes have a maternal copy and a paternal copy. We have 22 such chromosomes. One pair of chromosomes called sex chromosomes is odd in not always being a perfect pair. Women have a perfect pair of sex chromosomes, both called X. (XX) [0.5]	
	But men have a mismatched pair of sex chromosomes in which one is normal sized – X chromosome while the other is a short one called Y chromosome. (XY) [0.5]	
	A child receives one chromosome from mother which is essentially X chromosome. [0.5]	
	A child who inherits an X chromosome from her father will be a girl, and one who inherits a Y chromosome from him will be a boy. [0.5]	
31	i. The refractive index of a medium with respect to air is given by $\frac{speed \ of \ light \ in \ air}{speed \ of \ light \ in \ the \ medium}$. Since speed of light in the medium is always less than the speed of light in air, hence the above ratio is always greater than 1. [0.5+0.5]	3
	 ii. The ray of light is undergoing normal incidence at the air-plastic block interface. And for normal incidence there is no deviation. [1] iii. [0.5+0.5] 	
	Puris Blues	
	(Credit arrows, refracted ray moving away from normal)	
32	i. Joules law of heating states that the heat dissipated across a resistor is directly proportional to [0.5 for naming only]	3
	(a) the square of the current flowing through it	
	(b) The resistance of the conductor(c) duration of flow of current. [1.5]	
	$H = 1^2 Rt \text{ (alternative answer).}$	
	 ii. Resistance of a conductor depends on (a) the length of the conductor (b) the area of the cross section (c) nature of material (d) temperature of the conductor. 	
	(Any two should fetch full marks). [0.5+0.5]	
33	 (i) Anannya's answer is wrong. Electrical appliances with metallic bodies need an earth wire which provides a low resistance conducting path to the flow of current, in case there is an accidental leakage of current through the conducting body of the appliances. [1+1] 	3
	 (ii) An electrical fuse is a safety device that operates to provide protection against the overflow of current in an electrical circuit. An important component of an electrical fuse is a metal wire or strip that melts when excess current flows through it. [1]

	Oxidation, Addition/ Hydrogenation		
	Propanol, Propene		
38	a) Free ear lobe is dominant because it is found in a large majority of the population. (1)b) No. It is not sex linked. As per the data of the family as well as the class, it is indicat that free ear lobe is present in males as well as in females. (1)	ed 4	
	c) Father – Ff (free ear lobe), Mother – Ff (free ear lobe), Rahul – ff (attached ear lobe) a Nisha – Ff (free ear lobe) (1/2 x 4 = 2)	nd	
	OR		
	Suresh's father – ff (attached ear lobe), mother – ff (attached ear lobe), Suresh - (attached ear lobe), Siya – ff (attached ear lobe). If both parents have recessive charact then all the children can have recessive character only.		
39	(i) 12Ω lamps (only) on.	4	
	(a) 4Ω lamps (only) on [0.5+0.1]	5]	
	(ii) 12 V for both sets of lamps and all of them are in parallel.	1]	
	(iii) 12 Ω lamps are on when the wire is connected to position 2.		
	Voltage across both 12 Ω lamps = 12 V.		
	V=IR (Ohm's law).		
	$I = \frac{V}{R} = \frac{12}{12} = 1A.$ [1]	.]	
	4 Ω lamps are on when the wire is connected to position 3.		
	Voltage across both 4 Ω lamps = 12 V.		
	V=IR (Ohm's law).		
	$I = \frac{V}{R} = \frac{12}{4} = 3A.$ [1]	.]	
	OR		
	$P = V^2 / R$		
	All lamps are in parallel and hence same V for all lamps. 12×12 2×12 2×12		
	For 4 Ω lamps $\rightarrow P = \frac{12 \times 12}{4} = 36 W$		
	For 12 Ω lamps $\rightarrow P = \frac{12 \times 12}{12} = 12 W$		
	Hence 4 Ω lamps will have higher power. [0.5 x	4]
