If $\mu_{\mathrm{m}}$ increases, $1 / \mathrm{f}$ decreases, $\therefore \mathrm{v}$ increases.

$\mathrm{E}=1.1 \times 10^{28} \mathrm{~N} / \mathrm{C}$
Directed away from the sheet
(ii) Point Y

Because at 50 cm , the charge sheet acts as a finite sheet and thus the magnitude remains same towards the middle region of the planar sheet.

$$
\begin{align*}
& V^{\prime}=\frac{\mathrm{IrRv}}{\mathrm{r}+\mathrm{Rv}}=\frac{\mathrm{Ir}}{1+\frac{\mathrm{r}}{\mathrm{Rv}}}  \tag{1/2}\\

12(a) $\mathrm{I}=\frac{\varepsilon}{R+\frac{\rho 1 l}{A 1}}$ for Set A
$\mathrm{I}=\frac{\varepsilon}{R+\frac{\rho 1 l}{2 A 1}+\frac{\rho 2 l}{2 A 2}}$ for set B
Equating the above two expressions and simplifying

$$
\begin{equation*}
\frac{\rho_{1}}{A 1}=\frac{\rho_{2}}{A 2} \tag{1/2}

& \mathrm{~K}^{\prime}=\frac{I}{2}\left(\frac{\rho 1}{A 1}+\frac{\rho 2}{A 2}\right), \text { using the condition obtained in part (i) }  \tag{1/2}\\
& \mathrm{K}^{\prime}=\mathrm{I} \frac{\rho 1}{A 1}, \text { which is equal to } \mathrm{K} . \tag{1/2}

20. B : reverse biased

C: forward biased
Justification
21.(i) Emitter base junction is forward biased whereas base collector junction is reverse biased.
(ii) Small change in the current $I_{B}$ in the base circuit controls the larger current $I_{C}$ in the collector circuit. $I_{C}=\beta I_{B}$
(iii) Elemental semiconductor's band gap is such that the emitted wavelength lies in IR region. Hence cannot be used for making LED
