

## Monthly Test, June - 2024

Standard : 10

--	--	--	--	--	--

TIME : 45 minutes

Mathematics

Marks: 25

Part - I

 $4 \times 1 = 4$ 

Choose the correct answer and write the option code and the corresponding answer .

- If there are 1024 relations from a set  $A = \{1, 2, 3, 4, 5\}$  to a set  $B$ , then the number of elements in  $B$  is  
a) 3                      b) 2                      c) 4                      d) 8
- If  $f: A \rightarrow B$  is a bijective function and if  $n(B) = 7$ , then  $n(A)$  is equal to  
a) 7                      b) 49                      c) 1                      d) 14
- Let  $n(A) = m$  and  $n(B) = n$  then the total number of non-empty relations that can be defined from  $A$  to  $B$  is  
a)  $m^n$                       b)  $n^m$                       c)  $2^{mn} - 1$                       d)  $2^{mn}$
- $f = \{(2, a), (3, b), (4, b), (5, c)\}$  is a \_\_\_\_\_  
a) identity function                      b) one-one function  
c) many-one function                      d) constant function

Part - II

 $3 \times 2 = 6$ 

Answer any 3 questions. Question No. 8 is compulsory :

- Let  $A = \{3, 4, 7, 8\}$  and  $B = \{1, 7, 10\}$ . Which of the following sets are relations from  $A$  to  $B$ ?  
 $R_1 = \{(3, 7), (4, 7), (7, 10), (8, 1)\}$                       ii)  $R_2 = \{(3, 1), (4, 12)\}$
- Let  $f$  be a function  $f: \mathbb{N} \rightarrow \mathbb{N}$  define by  $f(x) = 3x + 2, x \in \mathbb{N}$ .  
i) Find the pre-image of 53    ii) find the image of 3
- Find  $k$  if  $f \circ f(k) = 5$  where  $f(k) = 2k - 1$ .
- If  $Z = \{0, 1\}$ , Find  $(Z \times Z) \times Z$  and  $n[(Z \times Z) \times Z]$ .

Part - III

 $3 \times 5 = 15$ 

Answer any 3 questions. Question No. 12 is compulsory :

- Given  $A = \{1, 2, 3\}$ ,  $B = \{2, 3, 5\}$ ,  $C = \{3, 4\}$  and  $D = \{1, 3, 5\}$ ,  
check if  $(A \cap C) \times (B \cap D) = (A \times B) \cap (C \times D)$  is true?
- Represent the given relation by a) an arrow diagram,                      b) a graph and                      c) a set in roster form, wherever possible.  $\{(x, y) | y = x + 3, x, y \text{ are natural numbers } < 10\}$
- If  $f(x) = 2x + 3$ ,  $g(x) = 1 - 2x$  and  $h(x) = 3x$ . Prove that  $(f \circ g) \circ h = f \circ (g \circ h)$ .
- If the function  $f: \mathbb{R} \rightarrow \mathbb{R}$  is defined by  $f(x) = \begin{cases} 2x + 7 & x < -2 \\ x^2 - 1 & -2 \leq x < 3 \\ 3x - 2 & x \geq 3 \end{cases}$  then find the values of  
i)  $f(4)$                       ii)  $f(-2)$                       iii)  $f(4) + 2f(1)$     iv)  $\frac{f(1) - 3f(4)}{f(-3)}$
