44. a) Write a summary (or) make notes of the following passage.

7x5=35

Vaccines are preparations of living or killed micro-organisms or their products, used for treatment of diseases. Vaccines are of two types – live vaccines and killed vaccines. Live vaccines are prepared from living organisms. (e.g.,) BCG vaccine, oral polio vaccine. Micro organism killed by heat or chemicals are called killed or inactivated vaccines. They require a primary dose followed by a subsequent booster dose; e.g. typhoid vaccine, cholera vaccine. Immunization is a process of developing resistance to infections by administration of antigens or antibodies. Inoculation of vaccines into the body to prevent diseases is called vaccination. One effective way of controlling the spread of infection is to strengthen the host defenses. This is accomplished by immunization, which is one of the cost effective weapons of modern medicine. When a large proportion of a community is immunized against a disease, the rest of the people in the community are benefited because the disease does not spread. The World Health Organization, in the year 1970, has given a schedule of immunization for children. This schedule is carried out in almost all countries. BCG was prepared by two French workers Calmette and Guerin. The bacilli was weakened and used for immunization against tuberculosis. DPT is a combined vaccine for protection against Diphtheria, Pertussis and Tetanus. MMR the Mumps, Measles, Rubella vaccine offers protection against viral infections. Also, some of the micro organisms which cause diseases are beneficial to us and they are used in the preparation of curd, bread, etc. (OR)

b) Write a paragraph on the various reasons for road accidents in India.

47. a) Read the following passage and answer the questions given below:

The history of medicinal plants is as old as the history of human beings. Most medicines are obtained either directly or indirectly from plants. All the major systems of medicines such as Ayurveda, Yoga, Unani, Siddha, Homeopathy are based on drugs obtained from plants and animals. These drugs obtained from medicinal plants are called secondary metabolites. Plants produce primary metabolites for their own living (e.g.,) Carbohydrates, amino acids, etc., and secondary metabolites for protection, competition and species interaction, (e.g.,) alkaloids, terpenoids, flavonoids, etc. phytochemistry is the study of phytochemicals which are chemical substances derived from various parts of the plant. Few plant derived drugs are Tulsi, Nannari, Nilavembu, Pappaya, etc.

Answer the following questions: (i) Name any two major systems of medicines. (ii) What are secondary metabolites?

(iii) Carbohydrates, amino acids, etc. are _____ (iv) What is phyto chemistry?
