DIRECTORATE OF GOVERNMENT EXAMINATION, CHENNAI- 6 S.S.L.C PUBLIC EXAM – MARCH/APRIL - 2025

SCIENCE ANSWER KEY

MAXIMUM MARKS: 75

Part I

Choose the Most Appropriate Answer.

 $12 \times 1 = 12$

Q.No.	Option	Answer	Mark
1.	(c)	98 x 10 ⁴ dyne	1
2.	(d)	bifocal lens	1
3.	(b)	10 V	1
4.	(b)	Irene Curie	1
5.	(b)	Hg	1
6.	(b)	increases	1
7.	(c)	1 x 10 ⁻¹¹ M	1
8.	(b)	Combustion of ethanol	1
9.	(d)	endodermis	1
10.	(b)	Metacentric	1
11.	(a)	December 1	1
12.	(d)	Scratch	1

Part - II

Answer any SEVEN questions.

Question No.22 is compulsory

 $7 \times 2 = 14$

Q.No.	Answer	Mark
13.	One calorie is defined as the amount of heat energy required to rise the temperature of 1 gram of water through 1°C.	2
14.	As sound travels through a medium the particles of the medium vibrate along the direction of propagation of the wave.	2
15.	Moist AirWaterOxygen	2
	(Any two)	

16.	Match the Fo	llowing					
		nal group –OH		Alcohol			
		cyclic compounds	_	Furan			
		rated compounds	_	Ethene			
	4 Soap	ated compediate	_	Potassium stearate	2	,	
		yclic compounds		Benzene		-	
	04,000	y one compeands		(Any Fo	are)		
17.	They regu	1					
	They allow	v blood in a sing	le dire	ction, prevent back flow	of 1		
	blood.						
18.	 Sudden sh bolting. 	noot elongation fo	llowed	l by flowering is known	as		
	 Bolting car Gibberellin 		cially o	n plants by the treatmen	t of	I	
		(or)					
19.	rosette plants	with gibberellins is	•	r flowering on treatment d bolting.	t of 2	2	
19.	A – Exine (or) (•					
	B –Intine (or) I	nner layer			4x 1	∕ ₂ =2	
	C - Generative	cell					
	D - Vegetative	nucleus					
20.	The kiwi did	not use its wings	for a	long time.		1	
	 According degenerate 		ise th	eory, the wing of kiwi	is	1	
21.	 Floods. 						
	 Drought. 						
	 Soil erosion 				2	2	
	 Loss of wild 	life					
	 Extinction of 						
	 Imbalance of biogeochemical cycles. 						
	 Alteration of 	climatic condition	IS.				
	 Desertification 	on .					
				(Any Tv	vo)		
22.	Molecular mass	of Methane(CH ₄)	= 12+		1		
		(9			
			12		4.	,	
	Mass % of carb	on (C)	=	x 100 = 75%	1/2	2	
			16				
			Á				
	Mass % of hydi	ogen (H)	_ 4	× 400 = 250/	1/2	6	
		99011 (11)	16	x 100 = 25%		_	
			10				

Part - III

Answer any SEVEN questions. Question **No.32** is compulsory

7x4=28

Q.No		Ans	swer	Mark			
23.	An id	eal gas obeys Boyle's law,	Charles's law and Avogadro's				
	law. According Boyle's law PV= constant According Charles's law V/T = constant According Avogadro's law V/n = constant After combining three equations PV/nT = constant \rightarrow (3) After combining three equations PV/nT = constant \rightarrow (4) $n = \mu N_A$ Using equation 5,4 can be written as PV/ $\mu N_A T$ = Constant Constant = k_B , Boltzmann constant (1.38 x 10 ⁻²³ JK ⁻¹) PV/ $\mu N_A T$ = k_B PV = $\mu N_A k_B T$ Here $\mu N_A K_B = R$, which is termed as universal gas constant whose value is 8.31 JMol ⁻¹ k ⁻¹						
		PV = RT gas equation is also called	as equation of state.	1 (result)			
24.		Myopia	Hypermetropia				
	i)	Myopia is short sightedness.	Hypermetropia is long sightedness.				
	ii)	It is due to the lengthening of eye ball.	It is due to the shortening of eye ball.				
	iii)	Nearby objects can be seen clearly .	Distant objects can be seen clearly.				
	iv)	Distant objects cannot be seen clearly .	Nearby objects cannot be seen clearly .				
	V)	Focal length of eye lens is reduced.	Focal length of eye lens is increased.	4			
	vi)	Distance between eyelens and retina increases.	Distance between eyelens and retina decreases.				
	vii)	Image of distant objects are formed before retina.	Image of nearby objects are formed behind retina.				
	viii)	To correct myopia, Concave lens is used.	To correct Hypermetropia Convex lens is used.				
			(Any Fou	r)			

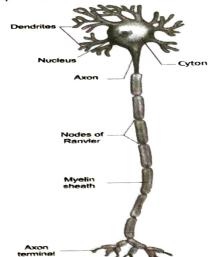

25.	2	5	
-----	---	---	--

Properties	Alpha rays (a)	Beta rays (β)	Gamma rays
What are they?	Helium nucleus (₂ He ⁴) consisting of two protons and two neutrons	They are electrons (.1e°), basic elementary particle in all atoms.	They are electromagn etic waves consisting of photons.
Charge	Positively charged particles. Charge of each alpha particle = +2e	Negatively charged particles. Charge of each beta particle = -e	Neutral particles. Charge of each gamma particles = zero
lonising power	100 times greater than beta rays and 10,000 times greater than γ rays	Comparatively low	Very less ionization power
Penetrating power	Low penetrating power (even stopped by a thick paper)	Penetrating power is greater than that of (a) rays. They can penetrate through a thin metal foil.	They have a very high penetrating power greater than that of β rays. They can penetrate through thick metal blocks.
Effect of electric and magnetic field	Deflected by both the fields. (in accordance with Fleming's left hand rule)	Deflected by both the fields; but the direction of deflection is opposite to that for alpha rays. (in accordance with Fleming's left hand rule)	They are not deflected by both the fields.
Speed	Their speed ranges from 1/10 to 1/20 times the speed of light.	Their speed can go up to 9/10 times the speed of light.	They travel with the speed of light.

4

20		
26.	Applications of Avogadro's Law	
	It explains Gay-Lussac's law.	
	 It helps in the determination of atomicity of gases. 	
	Molecular formula of gases can be derived using Avogadro's	4
	law.	
	It determines the relation between molecular mass and	
	vapour density.	
	It helps to determine gram molar volume of all gases.	
27 (i)	Alloy (Any four)	
27 (1)		
	An alloy is a homogeneous mixture of two or more metals or of	2
	one or more metals with certain non-metallic elements.	
/iii	Pagagone for all act	
(ii)	Reasons for alloying	
	 To modify appearance and colour. 	
	 To modify chemical activity. 	2
	 To lower the melting point. 	
	 To increase hardness and tensile strength. 	
	To increase resistance to electricity.	
	(Any two Reasons)	
28.	A soap molecule contains two chemically distinct ends	
	One polar end with short head with carboxylate group	2
	(-COONa) (water loving)	۷
	One non polar end with long tail made of the hydro carbon chair (wester beting)	
	chain (water hating)	
	Cleansing action	
	The hydrophobic part traps the dirt.	
	The Hydrophinic part makes the chare molecules soluble in	
	water.	2
	When a soap or detergent is dissolved in water, the	2
	molecules join together as clusters called 'micelles'.	
	 Their long hydrocarbon chain attach themselves to the oil 	
	and dirt .	
	 The charged Carboxylate end of the Soap makes micelles 	
	soluble in water. Thus the dirt is washed away with soap.	
29.	Locomotion takes place by two methods.	
	Looping or crawling movement	2
	2) Swimming movement	
	1) Looping or crawling movement	
	It is brought about by the contraction and relaxation of	
	muscles	2
	The two suckers serve for attachment during movement	_
	on a substratum.	
	2) Swimming Movement.	
	Leaches swim actively and perform undulating movements	
	in water	
	m water	

30. **Structure Of Neuron**

2

A neuron consists of three basic parts- cyton, dendrites, axon **Cyton**

- · Cyton is also called cell body or Perikaryon. It has a central nucleus with abundant cytoplasm neuroplasm.
- The cytoplasm has large granular body called Nissl's granules and the other cell organelles like mitochondria ribosomes, lysosomes and endoplasmic reticulum.
- Neurons do not have the ability to divide.
- Neurofibrils help in transmission of nerve implulses.

Dendrites

- These are the numerous branched cytoplasmic processes.
- They project from the surface of the cell body.
- They conduct nerve impulses towards the cyton.
- The branched projections increase the surface area for receiving the signals from other nerve cells.

Axon

- The axon is a single elongated slender projection.
- The end of axon has synaptic knob.
- Axolemma: The plasma membrane of axon
- Axoplasm: The cytoplasm of axon
- It carries impulses away from the cyton.
- The Axons may be covered by Protective sheath called Myelin Sheath.
- It is further covered by a layer of Schwann cells called Neurilemma.
- Myelin sheath breaks at intervals by depressions called Nodes of Ranvier.
- The region between the nodes is called as Internode.
- ●Myelin sheath acts as insulator and ensures rapid transmission of nerve impulses.

2

31 (i)	• So	uences of Soil Erosion il erosion causes a significant loss of humus, nutrients crease the fertility of soil	2
(ii)	Preventi Re Ca Cr ma Ru Ru Ru Wi a s	2	
32.	n ⁱ =	(Any two preventive measures)	1
	=	V-(1/10)v	2
	=	$\begin{pmatrix} 10 \\ 9 \end{pmatrix}$ n	
	=	10 x 90 9	
	n¹	= 100 Hz	1

Q.No.		3×7= 21	
33 (a) (i	Answer	Mark	
	Law of conservation of Linear Momentum There is no change is the linear momentum of a system of bodies as long as no net external force acts on them	2	
	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	1	
	 Proof Let two bodies A and B having masses m₁ and m₂ move with initial velocity u₁ and u₂ in a straight line. Let the velocity of the first body be higher than that of the second body. ie. u₁>u₂ During an interval of time t second they tend to have a collision. After the impact both of the bodies move along the same straight line with a velocity v₁ and v₂ respectively 	2	
	Force on body B due to A (v_2-u_2) $F_A = m_2$ t Force on body A due to B $F_B = m_1$		
	By Newton's III Law of motion Action Force = Reaction Force $F_B = -F_A$		
	$m_1 - m_1 - m_2 - m_2 - m_2 - m_1 - m_1 + m_2 - m_2 - m_2 - m_2 - m_2 - m_1 - m_1 - m_2 - m_2 - m_1 - m_2 $		
	Principle of Moments: When a number of like or unlike parallel forces act on a rigid body and the body is in equilibrium, then the algebraic sum of the moments in the clockwise direction is equal to the algebraic sum of the moments in the anticlockwise direction. (or)	2	
	Moment in clockwise = Moment in anticlockwise direction $F_1xd_1 = F_2xd_2$		

		(OR)						
33 (b)	(i)	Electric current is defined as the rate of flow of charges in a conductor.	2					
		(or)						
		I = Q/t						
	(ii)	The S.I unit of electric current is ampere (A).						
	(,	When a charge of one coulomb flows across any cross						
		section of a conductor in one second (or)						
		1 coulomb						
		1 ampere = 1 second						
	(iii)	Ammeter	1					
		It is connected in a circuit by series connection.	1					
34 (a)	(i)	Hygroscopic Deliquescence						
		substances substance	3					
		They absorb moisture and do not dissolve They absorb moisture and dissolve	3					
		They do not change its They change their						
		physical state on physical state on						
		exposure to air exposure to air 3) They may be amorphous They are crystalline solids						
		solids or liquids						
		4) Any one of Hygroscopic Any one of Deliquescence substances						
		Fx:Silica gel Ex: NaOH, KOH						
		(Any three)						
	(ii)	Aquatic animals live more in cold regions because, more amount of dissolved oxygen is present in the water of cold regions. This shows that the solubility of oxygen in water is more at low temperatures.	2					
	(iii)	Volume percentage is defined as the percentage by volume of solute (in ml) present in the given volume of the solution. (or)						
		Volume Volume of the solute x100						
		Percent = Volume of the Solution age						
		(or)	2					
		Volume of the solute						
		Volume Percent = Volume of the Solute+ age Volume of the solvent x100						

				(OR)			
34(b)	(i)		_			rsible Reaction	
		4) 1	Reversible Reacti	on	It is fast	rsible Reaction	
		-	t is relatively slow			m is not attained	
		2) 11	t attains equilibrium		Equilibriu	III is not attained	4
		3) 11	can be reversed und	ler	It cannot	be reversed	4
		s	uitable conditions				
		4) E	Both forward and back	ward		rectional. it	
		1 1	eactions take place		•	only in forward	
		S	imultaneously		direction.		
		1 - /	he reactants cannot		1	tants can be	
			onverted completely	into	•	ly converted into	
		p	roducts		products.		
						(Any four)	
25(2)	(ii)	A – Calcium Carbonate (or) CaCO ₃ B – Calcium Oxide (or) CaO C – Carbon di oxide (or) CO ₂ *Note: (If 'B' is written as either solid or gas, give one mark)				3	
35(a)	(1)	SI.No	Tissues	Mono	cot	Dicot	
		1	Number of xylem	Polya	rch	Tetrarch	
			•	-		Present	
		2	Cambium	Abser	nt	(During	
						secondary	
		3	Secondary Growth	Abser	nt	growth only) Present	4
		4	Pith	Prese		Absent	
				Made		Made up of	
		5	Conjunctive tissue		enchyma	Parenchyma	
		6	Example	Maize		Bean	
						(Any four)	
	(ii)	AERO	BIC RESPIRATION	AN	AEROBIC	RESPIRATION	
	(,	It takes place with the help of oxygen					
			se is broken down O ₂ ,H ₂ O and energy		se is conv	erted into ethanol	2
		Takes animal	place in Plants and s	Takes	Place in E	Bacteria and yeast	3
		It occu	rs in three steps	It is a	simpler pro	ocess	
		C ₆ H ₁₂ ($O_6+6O_2 \rightarrow$		$O_6 \longrightarrow 2C$,	
		6CO ₂₊	6H ₂ O+ATP	+2C ₂ F	H₅OH+Ene	rgy (ATP)	
						(Any Three)	

	(OR)	
35(b) (i)	TELOMERE SECONDARY CONSTRICTION PELLICLE MATRIX SECONDARY CONSTRICTION CONSTRICTION CONSTRICTION CENTROMERE Structure of chromosome	2
	 The Chromosomes are thin, long and thread like structures. It consists of two identical strands called sister chromatids held together by the centromere. Each chromatid is made up of spirally coiled chromonema The Chromonema has number of bead like structures called Chromomeres. The chromosomes are made up of DNA, RNA chromosomal proteins and certain metallic icons 	
	 The two arms of chromosome meet at a point called primary constriction (or) centromere. The Spindle fibres attach to the chromosomes during cell division. Secondary constriction Some chromosomes possess secondary constriction These occur at any point of the chromosome and are known as the nuclear zone or nucleolar organizer Telomere It is the end of the chromosome It prevents from joining the adjacent chromosome It maintains and provides stability to the chromosomes. Satellite It is an elongated knob – like appendage at one end of the choromosome. The chromosomes with satellites are called as the satchromosomes. 	3
35.(b) (ii)	Somatic Gene Therapy Somatic Gene Therapy is the replacement of defective gene in somatic cells. Correction of genetic defects in somatic cell may be beneficial to the patient but the corrected gene may not be carried to the next generation. Germ line Gene Therapy Germ line gene theraphy is the replacement of defective gene in germ cell (egg and sperm)	2
