Metallurgy TEST

12th Standard

Chemistry

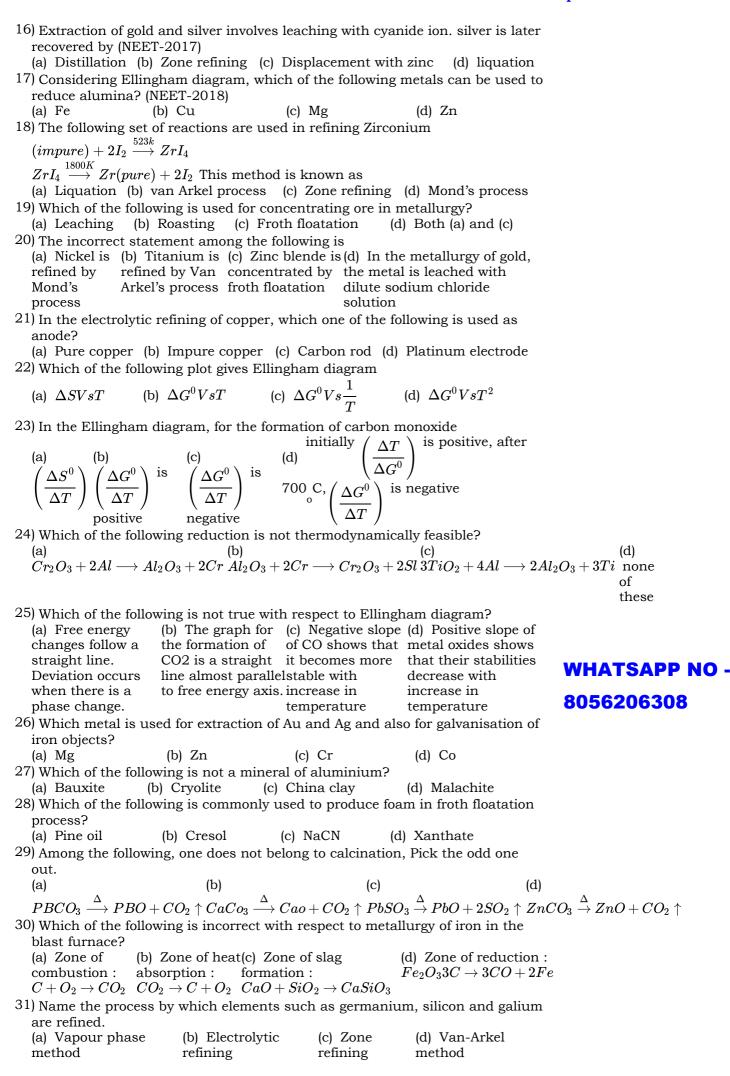

| Exam Time: 01:40:00 Hrs | Total Marks: 100 |
|--|--|
| (Multiple Choice Question) | 100011101110 1 100 |
| 1) Bauxite has the composition | |
| | O ₃ .2H ₂ O (d) None of these |
| 2) Roasting of sulphide ore gives the gas (A | a).(A) is a colourless gas. Aqueous |
| solution of (A) is acidic. The gas (A) is | a) CO (4) II C |
| () - | c) SO ₂ (d) H ₂ S |
| 3) Which one of the following reaction repr (a) (b) | (c) (d) |
| $2Zn + O_2 ightarrow 2ZnO \ 2ZnS + 3O_2 ightarrow 2ZnS$ | $+3O_2 ightarrow 2ZnO_2 ightarrow 2ZnO+2SO_2 \stackrel{	ext{(C)}}{MgCO_3} ightarrow MgO+CO_2 \stackrel{	ext{(G)}}{	ext{Both}}$ |
| | (a) |
| | and |
| | (c) |
| 4) The metal oxide which cannot be reduce | |
| (a) PbO (b) AL_2O_3 | (c) ZnO (d) Feo |
| 5) Which of the metal is extracted by Hall- | |
| | Cu (d) Zn |
| 6) Which of the following statements, about ore before reduction is not true? | it the advantage of roasting of sulpinde |
| 0 0 | pasting of the (d) Carbon and |
| sulphide is $\frac{\Delta G_r}{r}$ sulphide is $\frac{\Delta G_r}{r}$ sulphide is $\frac{\Delta G_r}{r}$ | nide to its oxide hydrogen are suitable |
| greater than roasting of is | reducing agents for |
| those for sulphide ore to therm | nodynamically metal sulphides |
| CS_2 and H_2S oxide feasily | ple |
| 7) Match items in column - I with the item | s of column – II and assign the correct |
| code. | |
| | |
| Column-II Column-II | |
| A. Cyanide process (i) Ultrapure | |
| B Froth floatation process (ii) Dressing of C Electrolytic reduction (iii) Extraction | |
| D Zone refining (iv) Extraction | |
| (v) Purificatio | |
| (a) (b) (c) | (d) |
| ABCD ABCD AB | A B CD |
| | $ \mathbf{v} (\mathbf{v}) (\mathbf{i}) $ $ \mathbf{i} (\mathbf{i}) (\mathbf{i}) (\mathbf{v}) $ |
| 8) Wolframite ore is separated from tinstor | ŭ <u>1</u> |
| (a) Smelting (b) Calcination (c) Roast | |
| 9) Which one of the following is not feasibl | |
| (a) $7n(a) + Cx^{2+}(aa) + Cx(a) + 7x^{2+}(aa)$ | $Cu(s) + Zn^{2+}(aq) \longrightarrow Zn(s) + Cu^{2+}(aq) \ Cu(s) + 2Ag^+(aq) \longrightarrow Ag(s)$ |
| | |
| 10) Electrochemical process is used to extra (a) Iron (b) Lead (c) S | |
| (a) Iron (b) Lead (c) S 11) Flux is a substance which is used to co | · · |
| • | o (c) Soluble impurities to (d) All of |
| into silicate soluble impurities | infusible impurities these |
| 12) Which one of the following ores is best | - |
| method? | |
| (a) Magnetite (b) Hematite | (c) Galena (d) Cassiterite |
| 13) In the extraction of aluminium from al | umina by electrolysis, cryolite is added |
| to | |
| (a) Lower the (b) Remove | (c) Decrease the (d) Increase the |
| | electrical rate of reduction |
| alumina alumina 14) Zinc is obtained from ZnO by | conductivity |
| (a) Carbon (b) Reduction using | (c) Electrochemical (d) Acid |
| reduction silver | process leaching |
| 15) Cupellation is a process used for the re | |

(d) iron

(c) Copper

(a) Silver

(b) Lead

| 32) Which of the following will give respective metal by self reduction? (a) Galena (Pbs) (b) HgS (c) ZnS (d) Both (a) & (b) | |
|--|---|
| 33) In the extraction of copper from its sulphide ore, the metal is finally obtained | |
| by the reduction of cuprous oxide with | |
| (a) Iron sulphide(b) Carbon (c) Copper (I) (d) Sulphur | |
| (FeS) monoxide (CO) sulphide (Cu_2S) dioxide (SO_2) | |
| 34) Which among the following reaction represents the formation of slag? | (4) |
| $ \begin{array}{c} \text{(a)} & \text{(b)} & \text{(c)} \\ CaO_{(s)} + SiO_{2(s)} \longrightarrow CaSiO_{3(s)} & 2C_{(s)} + O_{2(g)} \longrightarrow 2CO_{(g)} & Fe_2O_3 + 3CO_{(g)} \longrightarrow 2Fe_1O_{(g)} \\ \end{array} $ | $(d) \\ (a) + 3CO_{2(a)} CaCO_{2(a)} \longrightarrow C_{1}$ |
| 35) Which one of the following element is present as a~ impurity in pig iron? | (i) + $3 \le 2 \ge 2(g)$ $\le 3 \le 3 \le 3(g)$ |
| (a) Phosphorus (b) Manganese (c) Carbon (d) Silicon | |
| 36) Which of the following mineral contains calcium as well as magnesium? | WHATSAPP NO - |
| (a) Zinc bien de (b) Aragonite (c) Dolomite (d) Carnalite | 8056206308 |
| or) in the from-hoatation process the collectors such as pine on and xanthates, | 000020000 |
| etc enhance. (a) Non-wettability (b) Non-wettability (c) Non-wettability (d) Non-wettability | |
| of the mineral of the mineral of the gangue of the gangue | |
| particles in froth. particles in water particles in froth particles in water | |
| 38) Concentration of copper glance is done by | |
| (a) leaching (b) magnetic separation (c) froth flotation (d) hydraulic washing | |
| 39) Identify the decreasing order of carbon content in different forms of iron (a) Wrought iron > (b) Castiron > Pig (c) Pig iron > Cast (d) Cast iron > | |
| Pig iron > castiron iron > Wrought iron > Wrought Wrought iron > Pig | |
| iron iron iron | |
| 40) Sodium. magnesium and aluminum can be obtained from their ore by | |
| (a) electro metallurgy (b) pyro metallurgy (c) hydro metallurgy (d) smelting | |
| 41) The blistered appearance of Cu obtained from the reverberatory furance is due to evolution of | |
| (a) CO_2 gas (b) SO_2 gas (c) NO_2 (d) Due to evaporation of volatile materials | |
| 42) Identify the halide ore among the following | |
| (a) Epsom Salt (b) Pyrolusite (c) Anglesite (d) Rock Salt | |
| 43) Identify the metal that occurs in free state | |
| (a) Al (b) Au (c) Mg (d) Ca 44) $2PbS + 3O_2 \longrightarrow 2pbO + 2SO_2$ Name the process | |
| (a) Roasting (b) Calcination (c) Smelting (d) Leaching | |
| 45) The process of heating of copper pyrites to remove sulphur is called | |
| (a) froth flotation (b) roasting (c) calcination (d) smelling | |
| 46) ΔG^o vs T plot in the Ellingham's diagram slopes downward the reaction. | |
| (a) (b) (c) (d) 1 | |
| $Mg + rac{1}{2}O_2 \longrightarrow MgO\ C + rac{1}{2}O_2 \longrightarrow CO\ 2Ag + rac{1}{2}O_2 \longrightarrow Ag_2O\ 2Ag + rac{1}{2}O_2 \longrightarrow Ag_2O$ | \mathcal{O} |
| 47) Pick out the alloy that contains a non-metal as a constituent in it | |
| (a) Brass (b) Bronze (c) Steel (d) Invar | |
| 48) Ignition mixture used in aluminothermite process is | |
| (a) $Cr + AI_2O_3$ (b) $Mg + BaO_2$ (c) $AI + Cr2O_3$ (d) $Ba+MgO$ 49) Malachite has composition. | |
| 49) Malachite has composition. | |
| (a) 2CuCO ₃ .Cu(OH) ₂ (b) 2CuCO ₃ .Cu(OH) ₂ (c) Cu ₂ O (d) Cu ₂ S 50) Zinc blende is | |
| (a) ZnS (b) PbS (c) Ag_2S (d) Cu_2S | |
| 51) In acid leaching process. the insoluble sulphide is converted into soluble | |
| sulphate and elemental | |
| (a) carbon (b) lead (c) sulphur (d) zinc 52) Sulphide ore is converted to oxide form by using the process | |
| (a) Calcination (b) Roasting (c) Smelting (d) Leavhing | |
| 53) Magnetic separation it is based on the difference in the of the ore | |
| and the impurities. | |
| (a) magnetic (b) chemical (c) physical (d) melting | |
| properties properties point 54) Zinc is extracted from Zinc blende by | |
| (a) Carbon reduction (b) Nitrogen reduction (c) Oxygen reduction (d) All of | |
| process process these | |
| $ZnS + 3O_2 \stackrel{\Delta}{\longrightarrow} 2ZnO + 2SO_2 \uparrow$.The above equation is an example | |
| for | |

| | | (c) roasting | (d) leaching |
|--|---|--|---|
| | rgy is given by | | |
| (a) $\Delta G^0 = -nF$ | ΔE^0 (b) $\Delta G^o = nF$ | (c) $\Delta G^o = nFE^o$ | (d) $\Delta E^o = -nFG^0$ |
| 57) Na[Ag(CN) ₂] is | | | |
| (a) Sodium | (b) Sodium meta | a (c) | (d) Sodium dicyano |
| | aluminate | | |
| 58) $Zn \rightarrow 2[Au(C)]$ | $(2N)_{2}]^{-} \longrightarrow [Z_{n}(C)]$ | $N_{1}^{2-} + 2Auu $ Ir | n the above equation) |
| | | | if the above equation, |
| | ate of metallic;gold | | (1) |
| (a) I | (b) 0 | (c) +2 | (d) -2 |
| 59) Semiconductor | rs are purified by | method. | |
| | g(b) Electrolytic refi | ınıng(c) Mond's pro | ocess(d) Beisemerisation |
| 60) Magnesite is | | | |
| | | | (d) Magnesium |
| | carbonate | | |
| | | ed for refming titani | um. This method is |
| known as | | | |
| $Ti_{(g)}+2I_{2(s)} - \hspace{-0.5cm} - \hspace{-0.5cm} -$ | $ eg TiI_4 \left(vapour ight)$ | | |
| $Til_4(va[pour) -$ | $ ightarrow Ti_{(g)} + 2I_{2(s)}$ | | |
| | | (c) Van-Arkel (| d) Alumino thermic |
| process | process | process | process |
| - | | | Which acts as a |
| | | | (c) Slag (d) Flux |
| | aining sulphides of | | |
| | | | |
| 61) The percentage | (b) ore e of carbon in high (| orbon stool is | (u) matrix |
| | | | |
| | (b) 0.15 - 1.5% | | |
| | n process is suitable | | |
| | (b) carbonate | (c) suipnide | (d) flafide |
| 66) Steelis an alloy | | () | (1) |
| (a) iron and | (b) iron and | (c) copper and | (d) copper and |
| | 1 . | | • |
| | calcium | | |
| 67) Metal oxide is | converted into meta | 1 by the: pro | ocess. |
| 67) Metal oxide is (a) Calcination | converted into meta (b) roasting | 1 by the: pro (c) smelting (d) | ocess. beesemerisation |
| 67) Metal oxide is 6(a) Calcination68) In the thermite | converted into meta (b) roasting e procesis | l by the: pro (c) smelting (d) used as a reducing | ocess. beesemerisation g agent |
| 67) Metal oxide is (a) Calcination 68) In the thermite | converted into meta (b) roasting e procesis | 1 by the: pro (c) smelting (d) used as a reducing | beesemerisation g agent (d) CO2 |
| 67) Metal oxide is (a) Calcination 68) In the thermite | converted into meta (b) roasting e procesis | 1 by the: pro (c) smelting (d) used as a reducing | beesemerisation g agent (d) CO2 |
| 67) Metal oxide is (a) Calcination (b) In the thermite (a) AI (c) Galena is (a) PbS | converted into meta (b) roasting e procesis (b) CO (b) ZnS | l by the: pro (c) smelting (d) used as a reducing (c) C (c) Ag2S | beesemerisation g agent (d) CO ₂ (d) FeS ₂ |
| 67) Metal oxide is (a) Calcination (b) In the thermite (a) AI (c) Galena is (a) PbS | converted into meta (b) roasting e procesis | l by the: pro (c) smelting (d) used as a reducing (c) C (c) Ag2S | beesemerisation g agent (d) CO ₂ (d) FeS ₂ |
| 67) Metal oxide is (a) Calcination (b) In the thermite (a) AI (c) Galena is (a) PbS | converted into meta (b) roasting procesis (b) CO $\overline{\hspace{1cm}}$ (b) ZnS $\longrightarrow Hg_{(l)} + SO_2 \uparrow T$ | l by the: pro (c) smelting (d) used as a reducing (c) C (c) Ag2S | beesemerisation g agent (d) CO ₂ (d) FeS ₂ |
| 67) Metal oxide is (a) Calcination 68) In the thermite (a) AI 69) Galena is (a) PbS 70) $HgS_{(s)} + O_{2(g)}$ reduct | converted into meta (b) roasting procesis (b) CO $\overline{\hspace{1cm}}$ (b) ZnS $\longrightarrow Hg_{(l)} + SO_2 \uparrow T$ ion. | 1 by the: pro (c) smelting (d) used as a reducing (c) C (c) Ag2S The above reaction i | becess. beesemerisation g agent (d) CO ₂ (d) FeS ₂ is an example of |
| 67) Metal oxide is (a) Calcination 68) In the thermite (a) AI 69) Galena is (a) PbS 70) $HgS_{(s)} + O_{2(g)}$ reduct (a) metal | converted into meta (b) roasting procesis (b) CO (b) ZnS $\longrightarrow Hg_{(l)} + SO_2 \uparrow T$ ion. (b) hydrogen | 1 by the: pro (c) smelting (d) used as a reducing (c) C (c) Ag2S The above reaction i | beesemerisation g agent (d) CO ₂ (d) FeS ₂ |
| 67) Metal oxide is 6 (a) Calcination 68) In the thermite (a) AI 69) Galena is (a) PbS 70) $HgS_{(s)} + O_{2(g)}$ reduct (a) metal 71) In Hall-Herold | converted into meta (b) roasting procesis (b) CO $\longrightarrow Hg_{(l)} + SO_2 \uparrow T$ ion. (b) hydrogen processa | 1 by the: pro (c) smelting (d) used as a reducing (c) C (c) Ag2S The above reaction in (c) carbon act as an, anode. | beesemerisation g agent (d) CO ₂ (d) FeS ₂ is an example of (d) auto |
| 67) Metal oxide is 6 (a) Calcination 68) In the thermite (a) AI 69) Galena is (a) PbS 70) $HgS_{(s)} + O_{2(g)}$ reduct (a) metal 71) In Hall-Herold (a) Carbon bloc | converted into meta (b) roasting procesis (b) CO $\longrightarrow Hg_{(l)} + SO_2 \uparrow T$ ion. - a) I, II & IV
- b) Only II
- c) Only I
- d) III & IV
- 75) I.Froth flotation is used to concentrate sulphide ores.
 - II. Magnetic separation is applicable for ferromagnetic ores.
 - III. Roasting method used to sulphide ores to oxides
 - IV. Magnetic separation is used to concentrate heavy oxide ores.
 - a) III & IV
 - b) Only II
 - c) Only I
 - d) I, II & III
- 76) I.Ores are associated with non-metallic impurities
 - II. Ores are associated with rockymaterials
 - III. Removal of impurities is known as concentration of ore.
 - IV. Ellingham diagram shows the stability of different metal oxides.
 - a) I, II, III & IV b
 - b) Only II
 - c) Only I
 - d) III & IV
- 77) Identify the correct statement(s) with respect to the following reaction.

$$2Na[Al(OH)_1]_{(ag)}+CO_{2(g)}\longrightarrow Al_2O_3.\,xH_2O_{(g)}+2NaHCO_{3(ag)}$$

- (i) CO₂ is acting as a reducing agent.
- (ii) The solution is neutralised by passing CO₂ gas to form hydrates Al₂O₃ precipitate.
- (iii) Insoluble sulphate is converted into soluble sulphate.
- (iv) The precipitate is filtered off and heated around 1670 K to get pure Alumina.
- (a) only (ii)
- (b) only (iv)
- (c) both (ii) & (iv)
- (d) both (i) and (iii)
- 78) Identify the correct statement with respect to the following reaction

$$Zn_{(g)}+2[Au(CN)_2]_{(aq)}^-\longrightarrow [Zn(CN)_4]_{2(aq)}^-+2Au_{(s)}$$

- a) The above reaction takes place in extraction of zinc.
- b) Gold is reduced to its elemental state
- c) The process is called ammonia leaching.
- d) The above reaction is an example of cyanide leaching.
- a) III & IV
- c) Only I WHATSAPP NO 8056206308
- b) II &IV
- d) I, II, III & IV

(Assertion and reason)

79) **Assertion** :Aluminium is used in the, design of chemical reactors, : medical equipments, , refrigeration units and gas' pipelines.

Reason: Aluminium shows high resistance to corrosion

- (a) Both (A) and (R) are true and (R) is the correct explanation of (A)
- (b) Both (A) and (R) are true and (R) is not the correct explanation of (A).
- (c) (A) true but (R) false
- (d) Both (A) and (R) are false.
- 80) **Assertion(A)**: Metallic zinc is used in galvanising metals such as iron and steel.

Reason (R): Zinc is also used to produce die castings

- a) Both (A) and (R) are true and (R) is the correct explanation of (A).
- b) Both (A) and (R) are true and (R) is not the correct explanation of (A).
- c) (A) true but (R) false.
- d) Both (A) and (R) are false.
- 81) **Assertion(A)**: Zone refining is carried out in an inert gas atmosphere **Reason (R)**: The metal is treated with a suitable reagent which can form a volatile compound with the metal.
 - a) Both (A) and (R) are true and (R) is the correct explanation of (A).
 - b) Both (A) and (R) are true and (R) is not the correct explanation of (A).
 - c) (A) true but (R) false.
 - d) Both (A) and (R) are false

82) **Assertion**: Cuprite is concentrated by froth floatation process.

Reason: Cuprite is the sulphide ore

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- (c) Assertion is true, but reason is false.
- d) Both assertion and reason are false
- 83) **Assertion**: Calamine and Dolomite are the Carbonate ores.

Reason: Calamine is ZnCO₃ whereas dolomite is MgCO₃.ZnCO₃•

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false.
- d) Both assertion and reason are false
- 84) **Assertion**: Roasting process is involved in the metallurgy of Cu from malachite ore.

Reason: Roasting is the process of heating the ore in the absence of air.

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false.
- d) Both assertion and reason are false.
- 85) **Assertion**: Metallurgy of Agfrom argentite is known as hydro-metallurgy.

Reason: Argentite is Ag₂S.

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false.
- d) Both assertion and reason are false
- 86) **Assertion :**In the manufacturing of iron from hematite, silicon dioxide is added as flux

Reason: Lime stone is used as acidic flux in many case

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false.
- d) Both assertion and reason are false
- 87) **Assertion**: Wrought iron is purest form of iron with respect to other forms.

Reason: It has less than 0.5% carbon.

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false. WHATSAPP NO 8056206308
- d) Both assertion and reason are false.
- 88) **Assertion** :Aluminium metal is used as a reducing agent for the extraction of metals.

Reason: Aluminium has great affinity for oxygen.

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is. false.
- d) Both assertion and reason are false
- 89) **Assertion** :Carbon is used in blast furnace for reduction of Fe₂O₃• **Reason** :The gangue present is silica which is acidic in nature.
 - a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
 - b) Both assertion and reason are true but the reason is not the correct

explanation of the assertion.

- c) Assertion is true, but reason is false.
- d) Both assertion and reason are false
- 90) **Assertion**: Ti can be purified by van arkel process

Reason: TiI_4 is a volatile compound which decomposes at a high temperature.

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false.
- d) Both assertion and reason are false
- 91) **Assertion** :Aluminothermic process is the extraction of chromium from I chromic oxide.

Reason: Alumina has a high melting point.

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false.
- d) Both assertion and reason are false.
- 92) **Assertion** :A dilute solution of NaCN is used for leaching ores of silver and gold.

Reason: Impurities present in these ores dissolve in NaCN

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false.
- d) Both assertion and reason are false
- 93) **Assertion** :Carbonate and sulphate are concentrated by froth floatation process

Reason: Pine oil wets the gangue particle

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false.
- d) Both assertion and reason are false
- 94) **Assertion**: Galvanising is the process of coating iron and steel with metallic zinc.

Reason: Highly resistant to rusting and corrosion.

- a) Both assertion and reason are true and the reason is the correct explanation of the assertion.
- b) Both assertion and reason are true but the reason is not the correct explanation of the assertion.
- c) Assertion is true, but reason is false.

WHATSAPP NO - 8056206308

d) Both assertion and reason are false (Find the wrong statement)

95) About "Electrolytic refining"

- a) The crude metal is refined by electrolysis.
- b) The rods of impure metal are used as cathode.
- c) Thin strips of pure metal are used as cathode.
- d) Less electropositive impurities removed as anode mud.
- 96) About "Van-Arkel"
 - a)Van-Arkel method used for refining Zirconium.
 - b) Aluminium is a bad conductor of heat.
 - c) Aluminium shows high resistance to corrosion.
 - d) Aluminium is a good conductor of heat
- 97) a) Aluminium is used to produce die-castings
 - b) Gold nanopartides used as an catalysts
 - c) Copper is the first metal used by the human
 - d) Brass is an alloy of zinc and copper

- 98) a) Germanium is used as an semi conductor
 - b) Stainless steel is an important alloy of Aluminum
 - c) Zinc sulphide is used in making luminous paints.
 - d) Brass an alloy of zinc is used in water valves
- 99) a) Metallic oxides can be reduced by an alumino thermitc process.

- b) Flux + gangue \rightarrow slag
- c) Silica gangue present in the ore is basic in nature
- d) Cu2S + FeS \rightarrow Copper matter
- 100) a) During roasting are oxidised.
 - b) Smelting is a reduction process.
 - c) Malachite ore is concentrate by magnetic separation
 - d) Horn silver is Agel
